Durum: a range of prices are available depending upon various quality attributes and logistics.

Northern Durum offers from the Great Lakes for November 2023 delivery are quoted at \$12.72/bu (\$467.00/MT). For Desert Durum offers, contact your supplier.

Hard White: a range of prices are available depending upon various quality attributes and logistics.

Hard Red Spring: HRS price indications in this report are for a 65% DHV content out of the PNW and G.L. and a 40% DHV content out of the Gulf; for specific NS/DNS DHV premium spreads, contact your supplier.

Legend: M = Minneapolis Grain Exchange; K = Kansas City Board of Trade; C = Chicago Board of Trade;

\$ = cash price quote; N/A = quote not available; closed = Great Lakes are closed to vessels for winter; c/bu = cents per bushel;

Futures Contract Month: H = March; K = May; N = July; U = September; Z = December

NS/DNS=Northern Spring/Dark Northern Spring (subclasses of Hard Red Spring); HRW=Hard Red Winter; SRW=Soft Red Winter; SW=Soft White; WW=Western White (White Club & Soft White)

F.O.B. = "Free on board" - Seller is responsible for placing grain at the end of the loading spout. Buyer is responsible for providing the ocean vessel and for all other costs after the grain is delivered on board.

Basis: The difference between the cash price and futures month for specific quality, shipping period and geographical location.

Cash: Durum, SW and WW are quoted in dollars per bushel (\$/bu.) rather than basis for each contract month.

Convert: To compute cash price, add basis level and current futures to get price per bushel. Multiply by 36.743 to get price per metric ton.

Example: Basis = 70 and Future Price = \$9.00, the price per bushel is \$9.00 + .70 = \$9.70/bu. Price per metric ton is \$9.70 * 36.743 = \$356/MT.

All prices are based upon U.S. number two grade or better as certified by the Federal Grain Inspection Service (FGIS).

The weekly prices as reported by U.S. Wheat Associates are compiled through research from numerous market sources, including U.S. wheat exporters of all classes from various U.S. ports. The prices reported are representative of the value of number two grade and the proteins indicated. **They are not intended to represent offers nor should importers of U.S. wheat rely upon them as such. Additional factors may alter these prices significantly.**

These factors may include: (1) payment terms (differing from cash against documents which are the terms used in the U.S. Wheat Associates price report); (2) various quality factors, and method of quality certification; (3) loading terms (USW prices represent Free on Board and do not include loading rate guarantees, stevedoring costs or other elevator tariff charges); (4) different delivery periods than indicated in monthly prices reported by U. S. Wheat Associates.

U.S. Wheat Associates recommends regular contact with exporters of U.S. wheat in order to receive offers representative of your requirements.

This contact will allow importers to review contract terms and better understand the U.S. grading system, role and function of the Federal Grain Inspection Service (FGIS).

Contact: For questions, please contact tyllorledford@uswheat.org

Nearby Wheat Futures Settlement Prices

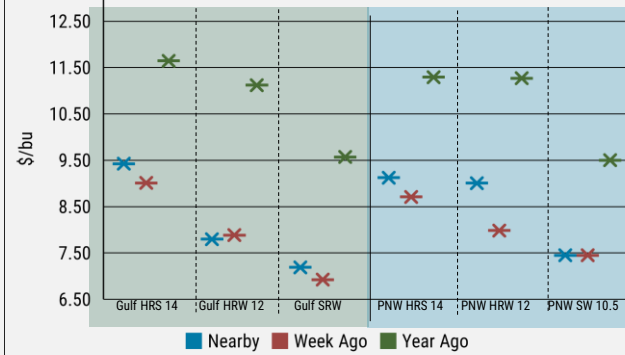

SW and SRW Nearby Cash Prices

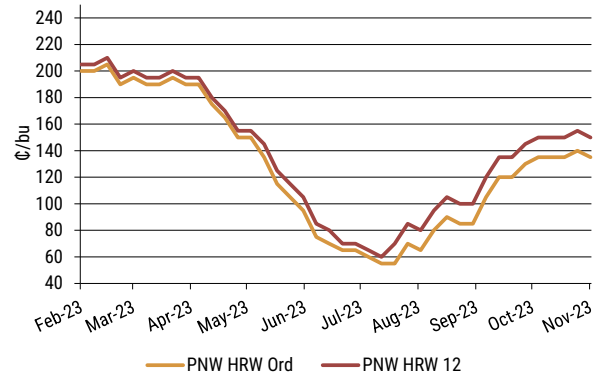

Wheat Futures Forward Curve

FOB Export Cash Price Comparison

HRW Protein Premiums - PNW

HRW Cash Prices at the Gulf

- Wheat markets ended the week mixed, with spring wheat seeing a bump. December 2023 CBOT soft red winter (SRW) futures were down 1 cent on the week, closing at \$5.75/bu. KCBT hard red winter (HRW) futures were down 3 cents, at \$6.40/bu. MGEX hard red spring (HRS) futures were up 12 cents at \$7.32/bu. CBOT corn futures were down 17 cents for the week at \$4.64/bu. CBOT January soybean futures were up 28 cents, at \$13.48/bu.
- Basis levels ended the week mixed, but there were no significant changes across the different classes in a slow week. HRS basis was down in the Gulf but up in the PNW as farmers' sales have been slow. HRW was down 5 cents per bushel in both export regions for the week. In the soft wheat category, there was no change in SW and SRW basis this week.
- USDA's November World Agricultural Supply and Demand Estimates (WASDE) increased U.S. wheat supplies, lowered domestic use, left the export forecast unchanged, and sees higher ending stocks for 2023/24. The global wheat outlook for 2023/24 is for increased supplies, fractionally lower consumption, less trade, and larger ending stocks. USDA estimated lower production in several countries, but once again a significant increase of 5 MMT production in Russia contributed to a bearish report for wheat.
- U.S. winter wheat conditions showed incremental improvement over the same time in 2022 according to USDA's Nov. 7 crop progress report. Winter wheat rated good to excellent was at 50%, up from last week and 20 percentage points over 2022. The report increased winter wheat emergence from 64% the week prior to 75%, 2 percentage points above the 5-years average. Read more at [crop progress report](#).
- For the week ending November 2, net U.S. commercial wheat sales of 354,400 metric tons (MT) were reported for delivery in 2023/24, toward the low end of trade expectations. Year-to-date 2023/24 commercial sales total 11.8 million metric tons (MMT). USDA expects 2023/24 U.S. wheat exports of 19.05 MMT, and commitments to date are 62% of total projected exports.
- Dry conditions persisted across the High Plains with warm temperatures, but South Dakota continued to see improvements after rain last week. Rain in the northwest helped modestly improve dryness with further improvement in Northern Idaho and Montana. With the southern Mississippi Valley extremely dry and persistent dryness north along the river, barge traffic remains slow.
- Reports that a shipping vessel was struck by a missile in the Black Sea briefly spiked wheat futures buying. It was not confirmed whether the vessel was set to load Ukrainian grain, just that it was struck upon entering port near Odessa. As the dust settled, futures moved lower following the volatile pattern with the on-going conflict with a bearish USDA report reinforcing the pressure on futures.
- Baseline projections from USDA's ERS show neither growth nor loss is anticipated for wheat through the next decade, with planted area hovering near 45.5 million acres and harvested area at about 37 million acres. U.S. wheat exports are projected to stay below 24.5 MMT per year but begin to recover after 2023/24.
- The Russian government has indicated its plans to keep a seasonal grain export quota at an elevated level of 24 MMT from Feb. 15 to June 30. However, the quota designated for wheat was not specified. Bloomberg reported that Dmitry Rylko, director of Moscow-based consultant IKAR said "The quota level is quite generous," and is unlikely to limit exports. Also this week, Russian President Vladimir Putin said at a conference in Kazakhstan that Russia will be able to hold its place as the top wheat exporter in the world because the crop is "very good."
- This week both USDA and the Rosario Grain exchange lowered Argentina's wheat production estimate as rains in October were too late to benefit the crop. USDA lowered its production estimate by 1.5 MMT to 15.0 MMT. Rosario Grains is more bearish, estimating production at 13.5 MMT, down from its previous forecast of 14.3 MMT.
